

About us

ADITYA CONSULTANT is an EPC (Engineering, Procurement and Construction) company that delivers integrated solar energy solutions and end-to-end security systems with a focus on quality, effectiveness, environmental sustainability and cost saving.

We install, operate and maintain solar systems for Industrial, Residential and Commercial sectors. We are operational in the solar and security industry for over 5 years, offering the best services to our customers. Aditya Consultant is a renewable energy and security firm that specializes in solar powered energy solutions including on-grid systems, off-grid systems, solar water heaters, street lights, EV chargers, CCTV, access control, and more.

We are based in Mumbai, Maharashtra, India with PAN India service and installation. Our network of engineers and installers across India gives us collective expertise of new developments in our industry, making Aditya Consultant one of the most reliable solar and security system designing and EPC firms in India.

Aditya Consultant has a dedicated team to provide Technical services for Solar and Security Projects from the initial project idea to the installation and Maintenance, using the best available materials and components with highly qualified professionals.

As an association, we have 20+ MW experience in solar industry as consulting, manufacturing, Installation, AMC and liaisoning work. Our approach ensures that the client continues to generate the highest yield from their solar PV plant, and the plant is able to offer high performance throughout the period of 25 years.

Mission

At Aditya Consultant, our mission is to drive the adoption of renewable energy and reliable security systems through cutting-edge technology and innovative design. We aim to provide our clients with tailored solar and security solutions that not only meet their energy and safety needs but also contribute to a greener and more secure future.

Vision

We envision a world where clean and renewable energy and dependable security are accessible to all, reducing our carbon footprint and protecting people and property. Our goal is to be at the forefront of the solar and security industry, delivering excellence in every project and fostering long-term partnerships with our clients.

We provide following Product & Services

- On Grid solar system
- Off Grid solar system
- Solar Panels Installation
- Solar Water Heaters
- Solar street lights and home lights
- Solar Water Pumps
- Solar EV Car Chargers
- Solar AMC and Maintenance Services

Security Products & Services

- CCTV and IP Surveillance Systems
- HD Cameras and IP Cameras
- Digital Video Recorders (DVR)
- Access Control and Attendance Systems
- Fire and Intrusion Protection
- Video Door Phones and Monitors
- Structured Cabling and Networking

Benefits of Solar

- Renewable source of energy
- Reduces electricity bills
- Low maintenance cost
- Earn from surplus generation
- Strong return on investment
- Environment friendly
- Life Span of 25 Years
- Tax benefit and subsidy available
- No Unit price escalation
- Loans, Subsidy and Insurance

Benefits of Security Systems

- 24/7 monitoring and protection
- Deter theft and unauthorized access
- Remote viewing via IP cameras
- Fire and intrusion early warning
- Controlled entry and attendance tracking
- Peace of mind for homes and businesses
- Professional installation and support

End to End EPC Solutions

From Concept to Execution:

Engineering	Procurement	Construction
- Yield assessment - Preliminary design - Selection of components - Finalization of design - Construction design - Detailed engineering	- Specifications - Tendering/bid comparison - Contract preparation - Purchase of modules - Equipment sourcing - Quality verification	- Installation documentation - Specialist site management - Logistics co-ordination - Safety co-ordination - Commissioning and testing - Performance verification

Financial model based classification

CAPEX:

CAPEX (Capital Expenditure) is a common business model for solar deployment in India where the consumer purchases the solar PV system, by making 100% of the payment upfront or financing the system, often through a bank.

OPEX:

OPEX (Operational Expenditure) model is where the RESCO (Renewable Energy Service Company) developer invests in solar rooftop asset and sells the generated power to the building owner in favour of a lower solar power tariff. The excess power may be sold by the building owner to the utility according to the power purchase agreement through net metering system.

Solar Solutions

Rooftop System

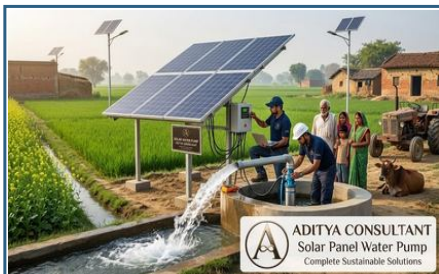

Solar Water Heater

Solar Street Light

Solar Water Pump
